

FOSTACARE DETOX SHOWER

Foreign compounds and special degradation or conversion products of certain organic compounds are not necessarily transported out of the human body via the kidneys or liver.

Heavy metals as well as a multitude of organic substances, many of which biochemically represent a considerable health risk as hormone-active substances, are mostly stored in the fatty tissue or released to the outside via the skin. In addition to alcohols, these are also oestrogenoid compounds such as agrochemicals (pesticides, herbicides, etc.).

The function of **FOSTACARE DETOX SHOWER** is based on supporting the elimination process via the skin and then removing the compounds mentioned as quantitatively as possible from the skin surface through special absorption processes and rinsing them off during the showering process.

Free from chemicals, crude oils and heavy metals.

Energized with the FOSTAC® technology.

Ingredients: Aqua purificata, Coco-Glucoside, Olea Europaea Oil, Disodium Cocoyl Glutamate, Sodium Cocoyl Glutamate, Sodium Coco Sulfate, Betula Alba Bark Specialextract, Maris Sal, Sucrose Coate, Citric Acid, Moringa Oleifera Specialextract, Cydonia Oblonga Specialextract, Calendula Officinalis Specialextract, Cellulose, Diatomaceous Earth

TECHNICAL DETAILS

Content: see description

Size: 200 ml
