

POLYTACH PLATE

The **POLYTACH PLATE** was developed with electromobility in mind. It creates order on a multi-dimensional level down to the deepest structures and can thus support machines, technical devices etc. in their efficiency and harmonize electrosmog.

Electric and hybrid vehicles are an important field of application.

The required number of plates depends on the performance of the electric motors and batteries, respectively their generated interference field.

For smaller electric vehicles (from approx. 15-40 kW engine power) two POLYTACH PLATES are usually required and for larger vehicles (approx. 40 kW engine power) four plates. When used in combination with the ESMOGBALANCER PORTABLE, one less plate is required.

The optimum number and placement of the plates is preferably tested. Our consultants will be happy to assist you.

The AUTO CHI is nevertheless recommended as additional support for the vital energy flow inside the car.

TECHNISCHE DATEN

Material: Glass fiber fabric, laminated

Grösse: A4 (210 x 297 mm)
